Dedicated Servers

Product Overview

A dedicated server grants its user exclusive rights to the server's bandwidth, memory and storage space, and complete control of server usage and software installation through admin (root) access to the server. This means that the server can be used for a virtually unlimited variety of purposes, including gaming, database management, and hosting and management of multiple traffic-intensive Web sites. Dedicated servers are particularly useful for companies and individuals that run very-high-traffic Web sites or applications.

Dedicated servers are available with the following operating systems:

- Linux: Red Hat Fedora Core 6 / Red Hat Enterprise 4 / Cent OS 4
- Microsoft: Windows Server 2003 Web Edition / Standard Edition

Customer Benefits

- Free rapid setup.
- Complete control over server space.
- Install and run virtually anything on server through admin (root) access.
- Manage multiple Web sites on a single server.
- 24 x 7 FTP access.
- 24 x 7 email, telephone, and web-based technical support.
- 24 x 7 monitoring.

- 24 x 7 physical security.
- Best-of-breed routers and servers.

How it Works

When the user purchases a dedicated server, he/she actually leases a server box, which will be configured and set up according to his/her preferences, but remains at our data center. A dedicated server account provides the user with a dedicated IP address, full control of server usage and software installation, with admin (root) access to the server.

Users may customize their servers upon purchase.

Figure 1 – Virtual dedicated servers product page

Virtual Dedicated Servers

Product Overview

Virtual dedicated servers offer many of the capabilities and features of dedicated servers, including admin (root) access and dedicated IP addresses, but at a much lower price. A virtual dedicated server is the perfect, affordable solution for users that wish to operate multiple Web sites, traffic-intensive Web sites, gaming servers, or simply want unlimited control of their server space through root (admin) access. Users share a server, but because each virtual dedicated server is effectively isolated from other accounts, the user has full control over the server space. Our virtual dedicated servers are available with choice of Windows or Linux operating systems.

Customer Benefits

- Complete control of server space.
- Generous bandwidth and disk space.
- Free rapid setup.
- Similar capabilities to those of dedicated servers, such as managing multiple Web sites on a single server, but at much lower price.
- 24 x 7 FTP access.
- 24 x 7 email, telephone, and web-based technical support.
- 24 x 7 monitoring.
- 24 x 7 physical security.
- Best-of-breed routers and servers.

How it Works

Servers are partitioned in such a way that each virtual dedicated server operates almost entirely independently of the other accounts that share the same server space. With a virtual dedicated server, users will enjoy consistent, high performance even when usage peaks on the main server.

- Users may customize their servers upon purchase.
